(54) Title: Rotating outdoor television aerial

(57) Abstract: An apparatus for rotating an aerial to track signals. Its driving means (motor), comprises an automatic rotation direction reversing and limiting means provided on its rotatable member and on the motor body. These two configurations lock at each other during motor rotation and facilitate change in its magnetization pattern which consequently reverses its rotation. This enables easy tracking of signals by simply energizing the motor drive with a switch means. The aerial rotator unit comprising an aerial is installed on pipe mast.
