(54) Title: Novel-clipping system

(57) Abstract: The invention relates to a clipping system (1) which provides a means for fastening trunking parts formed from metal. The lid (3) is attached to the base (2) as shown in (4) and clipped in place as shown in (10). The clipping is achieved by bending of the lid and base parts as shown in (1) using CAD for the design and CNC technology for the manufacturing. This system eliminates the use of screws in fastening of the lid to the base of the trunking formed from metal and may also be used in the fastening of parts formed from metal in other application such as in the manufacture of lighting fixtures.
