(54): USE OF TINIDAZOLE, STEROIDS AND ANTIPYRETICS IN THE PREVENTION AND TREATMENT OF MALARIA (51) Int.Cl.:

(57): Malaria, a problem to humanity because of the magnitude of mobility and mortality is presented as a priority problem for science to provide new answers to the ever-increasing drug resistance. The drug need for malaria treatment is summarised as specific and general. Therapeutic qualities of tinidazole overlapping with those of specific anti-malarial drugs are revealed in particular to chloroquine. The structural activity relationships (SARs) of both at the DNA level are revealed. Tinidazole is administered at a dose of 28.6-50mg/kg body weight. Eleven examples are highlighted to show how tinidazole and steroids effect cure in sensitive and drug resistant malaria. One ACT resistant case which readily responded to tinidazole and steroids is also presented.
