Following a review of the practice in the Institute with regard to the processing of utility model applications, the Institute has decided to discontinue the carrying out of substantive examinations in relation to utility model applications with effect from 1 May 2014 in order to align the practice with the Industrial Property Act, 2001. However, such applications shall continue to be subject to examination for compliance with all the other requirements of the Act and Regulations.

In particular, the applications shall be examined for compliance with filing date and formality requirements as well as for inventions that are excluded from protection and for non-patentable inventions under sections 21(3) and 26 respectively. Upon compliance with formality requirements, the applications shall be published as provided under section 42 of the Act. A Utility Model certificate shall then be granted and a certificate issued to the applicant as provided under sections 45 and 46 of the Act.

A light mobile field kitchen is provided with a burner capable of burning a variety of fuels with diesel as its primary fuel. The burner consists of at least one pre-heating coil which is directly exposed to hot gases on top of a fire trough to enhance pre-heating and atomization of the fuel. Pressurized fuel is made to flow through the coils and then to a fuel block which houses a rack and pinion mechanism for production of a hot jet of atomized fuel for ignition. The kitchen has adjustable stands with elephant foot assembly for ease of height adjustment and stability in soft soil respectively. A waste heat recovery mechanism is also provided by having a hot water heating tank as part of the chimney assembly.

(54) Title: Hydroxylated nebivolol metabolites

(51) Int.Cl.8: A 61P 9/00

(57) Abstract: Hydroxylated nebivolol metabolites increase NO release from human endothelial cell preparations in a concentration dependent fashion following acute administration. In addition, hydroxylated nebivolol metabolites, including but not limited to 4-hydroxy- 6,6'difluoro-, 4-hydroxy-5-phenol-6,6'difluoro-, and 4-hydroxy-8-pheno-6,6'difluoro-, have the ability to increase the capacity for NO release in human endothelial cells following chronic administration.; This invention provides hydroxylated nebivolol metabolites and compositions comprising nebivolol and/or at least one hydroxylated metabolite of nebivolol and/or at least one additional compound used to treat cardiovascular diseases or a pharmaceutically acceptable salt thereof, In addition, this invention provides methods of treating and/or preventing vascular diseases by administering at least one hydroxylated metabolite of nebivolol that is capable of releasing a therapeutically effective amount of nitric oxide to a targeted site affected by the vascular disease. Also, this invention is directed to the treatment and/or prevention of migraine headaches administering at least one hydroxylated metabolite of nebivolol. This invention may also be used in conjunction with or as a single treatment of metabolic syndrome disorders.

(54) Title: Drum manufacture

(51) Int.Cl.8: B 05B 13/02

(57) Abstract: The invention concerns a method of manufacturing steel drums on a production line. In the method, flat, unpainted steel sheets (10) are initially rolled to cylindrical forms. The free edges of the forms are then welded to one another to produce cylindrical bodies (18). Thereafter the cylindrical bodies are transported stepwise and with their axes upright, typically by means of a walking beam conveyor (22) through an external painting and internal treatment booth (23). In this booth each body is initially deposited at each of one or more roller spray stations (24) with the lower end of the body locating on a circular array of rollers (25) which stiffen the body and the rollers are rotated to cause the body to rotate while paint is sprayed onto its external surface. The externally painted bodies are then deposited at an internal coating station (32) at which the internal surface of the body is coated with an appropriate treatment. The externally painted and internally coated bodies are moved out of the booth and through a curing oven in which curing of the paint and internal coating takes place.

(51) Int.Cl.:
(57) Abstract: A process and system for liquefying a hydrocarbon gas is provided. The hydrocarbon feed gas is pre-treated to remove sour species and water therefrom. The pre-treated feed gas is then passed to a refrigeration zone where it is cooled and expanded to produce a hydrocarbon liquid. A closed loop single mixed refrigerant provides most of the refrigeration to the refrigeration zone together with an auxiliary refrigeration system. The auxiliary refrigeration system and closed loop single mixed refrigerant are coupled in such a manner that waste heat generated by a gas turbine drive of the compressor in the closed loop single mixed refrigerant drives the auxiliary refrigeration system and the auxiliary refrigeration system cools the inlet air of the gas turbine. In this way, substantial improvements are made in the production capacity of the system.

(54) HYDRO-RAM LIFT PUMP

(51)

(57) A hydraulic ram pump or shortly known as a hydram, is a water lifting device that operates automatically and continuously as long as there is a continuous supply of water. It lifts a small fall of water with no other external energy source i.e. it uses water to lift water. A hydram is a simple but unique device that utilizes energy from a stream of water falling from a low head as the driving power to pump part of the water to a head much higher than the supply head. fig 1 Water is a very basic human necessity for use in all aspects of life and more so for use by the household for cooking, washing, feed water for livestock and even for irrigation. The hydro-ram is designed to lift water from lower, usually streams and rivers, to higher grounds where people inhabit and can use water. The hydro-ram benefits the user in many ways: i) Saves on time and energy which would have been spent fetching water from the river. ii) Enable people to have a constant supply of water. iii) Because it is hydro powered, there is no extra cost of transmitting the water from the source to the point of use. iv) The pump is environment friendly because has no harmful emissions nor uses anything else except water.
