(51) Int.Cl.8: E 03B 3/03, E 03F 1/00

(57): The interior of a storage tank or permeable storage tank is filled with a storage composite (11), and one cylindrical rib (24, 28) is positioned on each of the lower surface and the upper surface of partitions (12) so as to project therefrom. Funnel-shaped end spacers (13) have a large-diameter tube (13a) for engaging with and connecting to the cylindrical ribs on the upper and lower surfaces of the partitions, and a small-diameter tube (13b) having a smaller diameter than the large-diameter tube. Both ends of cylindrical connecting spacers (14) engage with the small-diameter tube of a pair of end spacers, and given that the length of one side of a partition is S, then the diameter (T) of the section in which the cylindrical rib engages the large-diameter tube is set within the range of 0.40S-0.95S. Multiple levels of horizontal connected units (33), configured by connecting a plurality of partitions arranged within the same horizontal plane to one another, are provided, and end spacers and connecting spacers are interposed between the horizontal connected units of multiple levels. The production cost of storage tanks and permeable storage tanks is reduced, and the number of worker hours required for production of molds for forming these members is reduced, by using the comparatively simply shaped partitions, end spacers, connecting spacers and the like.

(54) Title: LONG TERM TREATMENT OF HIV-INFECTION WITH TMC278

(51) Int.Cl.:

(57) Abstract: PROBLEM TO BE SOLVED: To provide anti-HIV therapy involving the administration of dosage forms at long time intervals. ;SOLUTION: There is provided the use of a parenteral formulation including an anti-virally effective amount of TMC278 or a pharmaceutically acceptable acid-addition salt thereof and a carrier, for production of a medicament for the treatment of HIV-infected subjects, wherein the formulation is to be administered intermittently at a time interval of at least one week. In the use, an effective amount of TMC278 in the parenteral formulation is selected so that the blood plasma concentration of TMC278 is kept during a prolonged period of time above a minimum blood plasma level, which is the lowest efficacious blood plasma level for suppression of HIV by an HIV inhibitor. The formulation is administered by subcutaneous or intramuscular administration. ;COPYRIGHT: (C)2013, JPO&INPIT

(57) This invention relates to an apparatus and method for making blocks from earth or soil materials.

Conventional block forming apparatus commonly referred to as a "block press" have been in existence for several years now. The conventional block press is used to create building blocks from soil, which are then used in the standard methods of bricklaying and masonry using cement and mortar to bind and build permanent structures.

However, the interlocking block press, that is the subject of this application, differs greatly in the fact that the blocks that are created by the apparatus interlock into each other using the interlock contact principle.
