(54) Title: VEGETABLE SLICER

(57) The vegetable slicer is a utility model to be used to slice vegetables and especially kales. The model consists of a slicer that is driven by a crankshaft mechanism consisting a crank shaft and a crank rod. The crank shaft mechanism draws its motion from a pair of gears: the main drive gear and driven gear connected by a chain. The main drive gear is connected to a rotating handle that is manually rotated by the person operating the equipment. The driven gear provides motion to the crankshaft mechanism and also the lower roller. The vegetables are inserted through the body casing opening and are drawn towards the slicer by the lower roller. The upper roller rotates freely and offers tight grip of the vegetables through its spring loaded piston mechanism. The upper roller adjusts itself vertically according to the amount of the vegetables in fed. As they reach the end of the body casing, they are sliced by the slicer against the slicing base.
