(54) Title: Method and device for diagnosing tuberculosis

(51) Int.Cl.: G 01N 33/536, G 01N 33/68, C 07K 14/52

(57) Abstract: A rapid method for diagnosing tuberculosis (TB) in a subject is described. Antibodies are used to detect the presence of specific biomarkers, such as cytokine or chemokines, and in particular IFN-gamma or IP-10, in an unstimulated sample from the subject. An indicator is used to indicate binding of the antibodies to the biomarkers, indicating that the patient has active extrapulmonary tuberculosis. The method can be performed using a test strip containing the antibodies and indicator and onto which the sample is placed, using an ELISA assay, or using flow cytometry, a bioanalyser, a waveguide biosensor or surface enhanced Raman spectroscopy. Results can be available within a few minutes to a few hours, depending on the type of test device used. The method can detect extrapulmonary tuberculosis and can distinguish between active and latent tuberculosis. A kit including antibodies and a chromatographic indicator and instructions for use is also described.

 (57) Abstract: An enhanced strength grade level utility enclosure comprises a vertical wall structure having an upright inner wall panel (46) extending from an upper edge to a bottom edge of the structure. The inner wall panel (46) has an inside face spanning the enclosure's interior. One or more narrow, vertically extending slotted regions (58) are recessed in the inside face of the wall panel. Upright rigid support bars (60), optionally adapted for use as cable racks, are positioned in and rigidly affixed to separate slotted regions on the wall panel. The support bars (60) provide a continuous means of rigid vertical support from the upper edge down to the bottom edge of the enclosure's wall structure. The recessed support bars, in combination with the vertical wall structure, provide enhanced wall strength in excess of industrial vertical side wall and center load test standards.

 (54) Title: IN-BED SOLIDS CONTROL VALVE WITH IMPROVED RELIABILITY
 (51) Int.Cl.: B 01J 8/24
 (57) Abstract: A non-mechanical valve arrangement for use with circulating fluidized bed (CFB) boilers has a CFB reaction chamber and a bubbling fluidized bed (BFB) within an enclosure in the lower portion of the CFB reaction chamber, the BFB containing an in-bed heat exchanger (IBHX). Solids flowing from the BFB enclosure to the CFB reaction chamber may be controlled using one or more non-mechanical valves. Each non-mechanical valve is independently controlled using independently controlled fluidizing means. The non-mechanical valve has collectors to collect solids backsifting into the fluidizing means of the valve. Agglomerates are removed which could block the valve. Channel walls parallel to the direction of solids flow through the valve opening may be provided to reduce external interference with local fluidization to maintain the proper functionality of the non-mechanical valve.

 (54) Title: EPDCCH RESOURCE AND QUASI-CO-LOCATION MANAGEMENT IN LTE
 (51) Int.Cl.: H 04L 5/00, H 04W 72/04

(57) Abstract: An apparatus may receive a set of configurations for an EPDCCH that are tied (linked) to a set of configurations received for a PDSCH (they may be a subset of the set of PDSCH configurations). The apparatus may then receive and process the EPDCCH based on at least one configuration from the set of configurations for the EPDCCH. In another aspect, the apparatus may determine at least a first and second resource set configured for a control channel (e.g. EPDCCH) and may determine a common set of aggregation levels for the first and second resource sets. The apparatus may further determine first rate-matching parameters for the first resource set and second rate-matching parameters for the second resource set, and may process the control channel using the common set of aggregation levels and the first and second rate-matching parameters. In another aspect, the apparatus determines whether a starting symbol of an enhanced physical downlink control channel (EPDCCH) is an initial symbol (i.e. its value is zero) in a subframe based on an EPDCCH configuration and refrains from decoding a subset of legacy control channels in the subframe when the starting symbol of the EPDCCH is the initial symbol in the subframe.

(51) Int.Cl.: F 16L 19/02, F 24J 2/54, A 47B 45/00, A 47F 5/01

(57) Abstract: A solar tracking system with a plurality of tracking assemblies (12) moved by a single motor (14). A method and system that prevents overloading the motor or tripping a circuit breaker due to an obstructed or impeded tracker includes sensing movement (162) of the tracker assemblies (12) and entering into obstruction clearing modes. Obstruction clearing mode 1 (OCM1) (168) is a high frequency adjustable mode that prompts movement for an adjustable period of time. If movement commences, the system returns to a normal mode. If there is no movement, the system enters into an obstruction clearing mode 2 (OCM2) (176) with is an adjustable lower frequency series of attempts. If there is no movement, no further attempts are made. Each of these steps are monitored and controlled remotely. There are two types of secure connections for drivelines, torque tubes (16, 110, 220) or affixing driveline linkages (130) for high torque conditions.

(57) Abstract: Secure registration of a new application with a server system is provided. An old application has been registered with the system. A first link between the new application and the system establishes a first key and first check data is communicated from the system to the new application and passed to the old application. A second link between the old application and the system establishes a second key based on input of a credential to the old application; the first check data is communicated from the old application to the system. Enciphered second check data is communicated from the system to the old application over the second link and further encrypted by the old application using a third key. This generates doubly-enciphered check data which is passed to the new application and decrypted using the first key and a fourth key, generated at the new application based on the first check data and input of the credential to the new application.

The system stores information related to clients along with additional their personal information in a transient repository. These stored items of information are usually in different formats which are then converted by the system into a format desired by the user of the system or into a pre-defined format. An input module present in the system accepts form a user, a desired output information format type and a client identifier corresponding to the client whose information needs to be collated. Based on the client identifier, the system converts the stored client related information in the desired format and then collates and displays the converted information for further processing.

The engine unit is provided with a four-stroke engine body, a three-phase brushless motor, an inverter, and a control device. After the combustion operation of the four-stroke engine body and the positive rotation of a crankshaft have halted, the control device controls a plurality of switching units of the inverter in the state of the combustion operation of the four-stroke engine body and the positive rotation of a crankshaft being halted and there being no input of a startup instruction, and as a result the voltage from the battery imposed on the three-phase brushless motor is controlled, and the crankshaft is caused to rotate in the positive direction from a stopped position until the compression stroke of the four strokes. When there has been the input of a startup instruction, the control device causes the positive rotation of the crankshaft from the position of the crankshaft at the point in time the startup instruction has been input.

(51) Int.Cl.: H 01L 31/02, H 02J 3/38, H 02J 7/35, H 02S 40/32

(57) Abstract: A solar cell management system for increasing the efficiency and power output of a solar cell and methods for making and using the same. The management system provides an electric field across one or more solar cells. The imposed electric field exerts a force on both the electrons and holes created by light incident on the solar cell and accelerates the electron-hole pairs towards the electrodes of the solar cell. The solar cell management system considers variations in configuration of solar cells to maximize the power output of the solar cells. The accelerated electron-hole pairs have a lower likelihood of recombining within the cells' semiconductor's material. This reduction in the electron-hole recombination rate results in an overall increase in the solar cells' efficiency and greater power output.

 (54) Title: PARAMETRIC MIXING OF AUDIO SIGNALS
 (51) Int.Cl.: G 10L 19/008
 (57) Abstract: In an encoding section, a downmix section forms first and second channels of a downmix signal as linear combinations of first and second groups of channels, respectively, of an N-channel audio signal; and an analysis

section determines upmix parameters for parametric reconstruction of the audio signal, and mixing parameters. In a decoding section, a decorrelating section outputs a decorrelated signal based on the downmix signal; and a mixing section determines mixing coefficients based on the mixing parameters or the upmix parameters, and forms a $\frac{M}{2}$ -channel output signal as a linear combination of the downmix signal and the decorrelated signal in accordance with the mixing coefficients. The channels of the output signal approximate linear combinations of $\frac{M}{2}$ groups of channels, respectively, of the audio signal. The $\frac{M}{2}$ groups constitute a different partition of the audio signal than the first and second groups, and $2 \times \frac{M}{2} < M$.

(54) Title: RADIO SYSTEM USING NODES

(51) Int.Cl.: H 04B 7/185

(57) Abstract: A radio communication route enables communication from an originating ground station to a destination ground station via one of multiple randomly orbiting, rotating satellites with no active attitude control. The ground stations and satellites include directional antennas for receiving radio signals from and transmitting radio signals in multiple directions. The satellites store an address of a destination ground station from which an initial information signal is transmitted and antenna information identifying the satellite antenna on which the initial information signal was received. Plural satellite antennas transmit linking information identifying the satellite to the originating ground station. Data transmissions received at the originating ground station that designate a particular destination are transmitted by the originating ground station using the antenna on which the linking information was received and the satellite retransmits the data transmission using the satellite antenna identified by the stored antenna information.

(54) ECO-FRIENDLY GARBAGE BAG AND DUSTBIN LINER

(51)

(57) Garbage bag and dustbin liners are important in households, offices and hotels. They hold the garbage making these places tidy and clean. Most garbage bags and dustbin liners are made of plastic. However, due to the negative effects of plastic on the environment (soil, water, wildlife and plants) and humans Kenya joined other countries in the ban of plastic bag usage. Although, there are garbage bags and dustbin liners that are biodegradable. These bags are expensive and therefore not affordable. Consequently, Green Revolution Nature Protect Company Limited came up with the garbage bags and dustbin liners made from nylon laminated with polyurethane that is affordable, biodegradable and reusable. The product can be washed, has a drawstring at the opening ensuring a tight grip on trash cans. Furthermore, the product is made by tailoring the waterproof side inside the bag making it leak-proof.

(54) NUTS IN BEVERAGES

(51) A 23L 25/00

(57) Nuts in beverages are a range of beverages containing substantial proportions of powdered whole macadamia nuts (both shell and kernel) for human consumption. The main characteristic of these products is the substantial presence of macadamia shell powder which is considered unpalatable by other macadamia brands. The presence of the nut shell powder is occasioned by the invention's primary objective of simplifying macadamia processing to just grinding dried nuts in a mill to lower processing costs. The shell is present as a relatively neutral byproduct of the process. Almost tasteless and odorless and with no known side effects the shell does not notably affect the positive attributes of the accompanying kernel especially when blended with other beverages of strong aroma and tastes which may include but not limited to coffee, tea and cocoa. Rather, the shell provides additional dietary fiber. Thus, the invention provides cheaper beverages with higher nutritional value and better tastes.

(54) FUEL-LESS GENERATOR

(51) H 01L 41/00, H 02K 49/00

(57)

This invention is in the field of generation of electricity and relates rotational kinetic energy, and particularly to an improved system of harnessing gravitational potential energy and efficient transmission force to rotating hub of electricity generator. It employs different sizes of pulleys appropriately hooked together by rubber-belts for circular motion transmission. It is characterized in that Mechanical Force may be generated by hand crank or electrical motor. In the invention a 12 Volt Battery (1) supplies DC current to Inverter (2), converting it into 240 volt, and passing it to Motor (3), to rotate Generator (4), where an enlarged pulley (5) increases torque of motor, and enlarged pulley (6) increases torque of generator, reducing its inertia while frame work (8) supports Shaft (7) and bearings (15) and (16), and co-axial pulleys

(9) and (10).Rubber Belts (11) and (12) connect motor pulley (5) and generator pulley (6) such that from battery (1) to flywheel pulley (10) constitute the "TURBINE" operates with large mechanical advantage, causing generator (4) to rotate at required velocity, to generate clean electrical current for external application in that a complete machine generates 5 Kilowatts and occupies a space of one cubic meter, weighs 60kgs.

12.5 Removal

Section 23 of the Trade Marks Act provides that registration of a trade mark in Kenya shall expire after a period of **ten (10) years**. The Act also provides that the proprietor of a registered trade mark may make an application for renewal of the trade mark upon completion of the prescribed Form TM 10 and payment of the prescribed renewal fee.

Rule 65 of the Trade Mark Rules provides that where no application for renewal of a registered trade mark is received upon expiry of the ten year period, the Registrar of Trade Marks shall notify the proprietor of this fact. Where no application for renewal of the registered trade mark is received within a period of **sixty (60) days** from the date of the notice for renewal by the Registrar, rule 67 of the Trade Mark Rules requires the Registrar of Trade Marks to publish this fact.

In accordance with the above provisions, the Registrar of Trade Marks hereby notifies the public that the proprietors of the trade marks indicated below were duly notified and that they did not file applications for renewal of their respective trade marks.

In accordance with the provisions of rules 67 and 68 of the Trade Mark Rules, the public is hereby notified as follows:

- (a) Where the proprietor of a registered trade mark makes an application for renewal of a mark that has been published herein and pays the renewal fee together with the additional prescribed late renewal fee **within thirty (30) days** from the date of this publication, the trade mark shall be renewed and shall not be removed from the Register of Trade Marks;
- (b) Where no application for renewal of a trade mark published herein is received **within thirty (30) days** from the date of this publication, the trade mark shall be forthwith removed from the Register of Trade Marks; and

Once the trade mark is removed from the Register of Trade Marks, the proprietor may thereafter make an application for renewal of the mark upon payment of the prescribed renewal fee together with the additional prescribed restoration fee. The trade mark shall then be restored to the Register of Trade Marks upon the Registrar of Trade Marks being satisfied that it is just to do so and upon imposing such conditions as the Registrar may deem fit.
