(57) The present invention discloses a methodology for the stabilization of expansive clay soil using plant-based ashes for Subgrade Class S2 in Pavement Construction. The invention comprises addition of about 20% by weight of plant based ashes (including but not limited to rice husk ash, RHA) and about 2% by weight of lime, and mixing of the top 1200 mm of the soil with the stabilizer using pulverizing equipment. The invention improves the California bearing (CBR) ratio by 900%, reduces the soil plasticity by about 905 and decreases free swell by about 70%. Use of the plant-based stabilizer is not only an affordable green technology, but also gives expansive clays the minimum strength and swell characteristics specified in Kenya's Road Design Manual.

(57) Synthesis of antimalarial hybrid composition comprising of sarcosine and aniline pharmacophores as scaffolds for management of plasmodial infections is disclosed. The said antiplasmodial hybrid drug further comprises sarcosine and aniline derivative. The said hybrid is synthesized by coupling sarcosine and 3-Chloro-4-(4-chlorophenoxy) aniline pharmacophores. These pharmacophores are selected based on in silica studies that show that these molecules can bind protein ligands of plasmodium parasites. The invention further provides a method of synthesizing hybrid drug comprising adding thionyl chloride to sarcosine in order to form acyl chloride, and adding the resultant mixture to aniline to form sarcosine-aniline hybrid molecule. The IC<sub>50</sub> of sarcosine-aniline hybrid is 44.80 ± 4.70 ng/ml compared to that of aniline derivative which is 22.86 ± 1.26 ng/ml. The IC<sub>50</sub> of control drugs were 2.63 ± 0.38 ng/ml, 5.69 ± 0.39 ng/ml for artesunate and chloroquine respectively. Cytotoxicity results revealed that sarcosine-aniline hybrid is safe and non-toxic.

 (54) Title: GROUND-BASED BEAMFORMED COMMUNICATIONS USING MUTUALLY SYNCHRONIZED SPATIALLY MULTIPLEXED FEEDER LINKS  
 (51) Int.Cl.: H 04B 7/204, H 04B 7/185  
 (57) Abstract: Embodiments provide ground-based beamforming with mutually synchronized spatially multiplexed gateways in a wireless communications system. Some embodiments operate in context of a satellite having a focused-beam feeder antenna that communicates with multiple, geographically distributed gateway terminals (e.g., single gateway per beam), and a user antenna that provides communications with user terminals via formed user beams. The gateway terminals can communicate feeder signals that are beam-weighted and mutually phase-synchronized (e.g., according to satellite and/or loopback beacons). For example, the synchronization can enable forward uplink signals to be phase-synchronously received by the satellite, and the beam weighting can enable the forward downlink signals to spatially combine to form forward user beams. Embodiments can achieve extensive bandwidth reuse through mutually synchronized spatial multiplexing of the feeder-link communications.

A plurality of sensors is provided in the physical venue, which are in communication with the master sensor node over a wireless network channel. The plurality of sensors and the master sensor node are communicatively coupled to a mobile device over a radio frequency network channel. The master sensor node identifies the mobile device and its location, wherein the mobile device is within a predefined distance from the master sensor node. The master sensor node receives a request from the mobile device to authenticate its identity and location to a third party connected the radio frequency network channel. The master sensor node authenticates the mobile device to the third party, which provides the mobile device access to a network connection.

(51) Int.Cl.: A 01B 79/02  
(57) Abstract: A desert or sand control method. Water spraying and spreading of solid organic substances are manually or mechanically performed on the surface of a desert or sand in any sequence, or a solution having cohesiveness and adhesion and formed by solid organic substances is directly sprayed. A sand body on the surface of the desert or sand that is sprayed with the solution formed by solid organic substances or spread with the solid organic substances and sprayed with the water is uniformly stirred by using a stirring apparatus, so that the sand body on the surface layer of the desert or sand is modified into a modified sand body. The control method can be directly performed on a desert or sand needing to be controlled, and the sand body modified by means of stirring does not need to be individually paved, so that numerous construction costs are saved, and the construction efficiency is improved. In addition, the process of stirring the surface layer of the desert or sand can also be used as a farming process on the surface layer of the desert or sand that has changed into soil, so as to facilitating subsequent seeding operation on the controlled desert or sand.

(57) Abstract: The present invention relates to a process and system for gasifying biomass or other carbonaceous feedstocks in an indirectly heated gasifier and provides a method for the elimination of condensable organic materials (tars) from the resulting product gas with an integrated tar removal step. More specifically, this tar removal step utilizes the circulating heat carrier to crack the organics and produce additional product gas. As a benefit of the above process, and because the heat carrier circulates through alternating steam and oxidizing zones in the process, deactivation of the cracking reactions is eliminated.

(51) Int.Cl.: F 03B 13/16, F 03B 13/14

(57) Abstract: A hinge system and method for an Articulated Wave Energy Conversion System (AWECS) that provides for hinge and piston pump displacements due to multiaxis forces in allowing adjacent barges of the AWECS to pivot with respect to one another due to wave motion. The hinge system uses a plurality of parallel hinges, and axle segments, coupled between adjacent barges wherein the hinges are coupled to upright trusses positioned transversely along facing edges of each barge. Hinge bracing includes lower V-shaped struts that act as lower stops when the barges pitch up and also include upper struts that act as upper stops when the barges pitch down. The pumps are positioned in parallel. The pumps have special couplings such as ball joint couplings that permit motions other than longitudinal pump/ram motions due to multi-axis forces generated by the wave motion and thus provide omni-directional stress relief to the pumps.

(54) Title: ARTICULATING WAVE ENERGY CONVERSION SYSTEM USING A COMPOUND LEVER-ARM BARGE

(51) Int.Cl.: F 03B 13/20, B 63B 35/28

(57) Abstract: An articulating wave energy conversion system (AWECS) formed of a forward barge hingedly-coupled to a two-part aft barge configuration for reducing the attenuation of available wave energy along the length of the AWECS. The two-part aft barge includes a buoyant section that is either rigidly-connected, or unitized with, a lever-arm barge. The lever-arm barge includes a draft that is much smaller than the drafts of the forward barge and buoyant section. In addition, the lever-arm barge includes a large waterplane area that results in large hydrostatic forces as the waves pass. One or more intermediate barges may be hingedly-coupled between the forward barge and the aft barge. Pumps can be positioned across every hinge to convert the barge articulations into mechanical energy for driving the pumps based on wave motion for a variety of functions, such as water desalination, electrical energy generation, etc.

(51) Int.Cl.: H 01L 31/02, H 02J 3/38, H 02J 7/35, H 02S 40/32

(57) Abstract: A solar cell management system for increasing the efficiency and power output of a solar cell and methods for making and using the same. The management system provides an electric field across one or more solar cells. The imposed electric field exerts a force on both the electrons and holes created by light incident on the solar cell and accelerates the electron-hole pairs towards the electrodes of the solar cell. The solar cell management system considers variations in configuration of solar cells to maximize the power output of the solar cells. The accelerated electron-hole pairs have a lower likelihood of recombining within the cells' semiconductor's material. This reduction in the electron-hole recombination rate results in an overall increase in the solar cells' efficiency and greater power output.

(51) Int.Cl.: H 04W 4/00, G 06Q 30/02, G 06Q 50/10

(57) Abstract: The invention relates to methods for delivering advertising information in mobile operator networks. The aim of the present invention is to develop an effective method of using misdialed call traffic as a channel for targeted operator advertising messages. The present method for the targeted delivery of advertising information to a mobile communication subscriber with the option of immediately activating the advertised service consists in automatically playing back prerecorded voice messages when a subscriber dials a short code, pre-setting switching equipment to route calls made to short codes currently unused by the operator to an IVR platform, wherein the IVR platform is programmed to respond to the subscriber with an advertising message targeted at the subscriber in question based on data about the subscriber, obtained by a query to the billing subsystem (IN platform) the moment the call was made, and to wait for a response from the subscriber regarding activation of the advertised service. Upon receipt of a response from the subscriber in the form of a DTMF signal, the advertised service is activated by means of requests sent on behalf of the subscriber to the relevant operator system, wherein MAP USSD requests or SMS messages or HTTP API calls are used on the activated service side, or the exchange of TCP/IP packets is used, as specified by the operator.

The filter cassette is disposed horizontally within the filter module and there is an outlet for expression of filtered drinking water. The filter module is disposed below the receiver module. The position of the filter module relative to the receiver module and the weight of stored water within the filter module enables filtering of water through the filter cassette solely by action of gravity to produce drinking water. The present system is designed to maximize and utilise the force of gravity which generates a natural pressure to force water through the filter without a pump. The pores of the filters are so small that it filters out even the smallest waterborne viruses, such as the polio virus.

 (51) Int.Cl.: H 01L 31/02, H 02J 3/38, H 02J 7/35, H 02S 40/32  
 (57) Abstract: A solar cell management system for increasing the efficiency and power output of a solar cell and methods for making and using the same. The management system provides an electric field across one or more solar cells. The imposed electric field exerts a force on both the electrons and holes created by light incident on the solar cell and accelerates the electron-hole pairs towards the electrodes of the solar cell. The solar cell management system considers variations in configuration of solar cells to maximize the power output of the solar cells. The accelerated electron-hole pairs have a lower likelihood of recombining within the cells' semiconductor material. This reduction in the electron-hole recombination rate results in an overall increase in the solar cells' efficiency and greater power output.

## 12.4 Removals

Section 23 of the Trade Marks Act provides that registration of a trade mark in Kenya shall expire after a period of **ten (10) years**. The Act also provides that the proprietor of a registered trade mark may make an application for renewal of the trade mark upon completion of the prescribed Form TM 10 and payment of the prescribed renewal fee.

Rule 65 of the Trade Mark Rules provides that where no application for renewal of a registered trade mark is received upon expiry of the ten year period, the Registrar of Trade Marks shall notify the proprietor of this fact. Where no application for renewal of the registered trade mark is received within a period of **sixty (60) days** from the date of the notice for renewal by the Registrar, rule 67 of the Trade Mark Rules requires the Registrar of Trade Marks to publish this fact.

**In accordance with the above provisions, the Registrar of Trade Marks hereby notifies the public that the proprietors of the trade marks indicated below were duly notified and that they did not file applications for renewal of their respective trade marks.**

In accordance with the provisions of rules 67 and 68 of the Trade Mark Rules, the public is hereby notified as follows:

- (a) Where the proprietor of a registered trade mark makes an application for renewal of a mark that has been published herein and pays the renewal fee together with the additional prescribed late renewal fee

**within thirty (30) days** from the date of this publication, the trade mark shall be renewed and shall not be removed from the Register of Trade Marks;

- (b) Where no application for renewal of a trade mark published herein is received **within thirty (30) days** from the date of this publication, the trade mark shall be forthwith removed from the Register of Trade Marks; and

Once the trade mark is removed from the Register of Trade Marks, the proprietor may thereafter make an application for renewal of the mark upon payment of the prescribed renewal fee together with the additional prescribed restoration fee. The trade mark shall then be restored to the Register of Trade Marks upon the Registrar of Trade Marks being satisfied that it is just to do so and upon imposing such conditions as the Registrar may deem fit.
