(57) The cloud connected sensor devices using Internet of things (IoT) technologies are nowadays widely used to build decision support systems relying field sensors that collect data to overcome many problems in the real-world. One of the most interesting fields having an increasing need of decision support systems is precision agriculture (PA) especially in the context of large scale farms. However smallholder farmers have been left out of these technologies due to high cost of adoption and challenges in making use of the collected data to make knowledge driven decisions in crop production. This disclosure presents the best way to solve the agricultural problems related to farming resources optimization at farm level, decision making support, and farm and soil monitoring. This approach provides real-time information based on the farm specific conditions and crops that will help farmers make right decisions using principles of ToT, sensor and data analytics technologies.

(54) Title: ANTIMALARIAL COMPOSITION COMPRISING 3-CHLORO-4-(4-CHLOROPHENOXY) ANILINE

(51) Int.Cl.2016.01: A 61K 31/00

(57) Abstract:

An antimalarial composition comprising 3-chloro-4-(4-chlorophenoxy) aniline is disclosed. The present invention concerns the effectiveness of 3-chloro-4-(4-chlorophenoxy) aniline (ANI) of structural Formula (A) below against both CQ-sensitive (3D7) and CQ-resistant (W₂) Plasmodium falciparum isolates in vitro and against Plasmodium berghei in mice. The drug's IC₅₀ concentration is determined by culturing the parasite in media containing radiolabeled hypoxanthine while determination of chemo suppression of drug combinations are based on Peters' 4-day test in P. berghei infected Swiss albino mice using Giemsa-stained thin tail blood smears. It teaches that in the in vitro test, 3-chloro-4-(4-chlorophenoxy) aniline has an IC₅₀ value of 8.1 μg/ml against the chloroquine resistant strain (W₂) and an IC₅₀ value of 7.1 μg/ml against chloroquine sensitive (3D7). It reveals that the 50% inhibitory concentration of 3-chloro-4-(4-chlorophenoxy) aniline in the Swiss albino mice is 4.18 mg/kg thus demonstrating an increased effectiveness over individual drugs portending effective antimalarial drug partnership.

 (54) Title: FINGER-MOUNTED READING LIGHT WITH AUTOMATIC SHUT-OFF
 (51) Int.Cl.:
 (57) Abstract: A lighting apparatus for illuminating a page or e-reader, with a contact-sensitive pushbutton (105) accessible externally. The apparatus is mounted over the fingertip, held in place by flexible ribs (106). Power switch, flap (103) is raised to ON position, powered by a battery in compartment (102). When ready to read, pushbutton (105) should be directly above the page and the beam from light source (101) cast onto the page. Rotating dimmer switch (104) to select brightness releases pushbutton (105) to protrude. The mounted finger, slightly raised, directs reading by pointing the light beam. When reading ceases, the pointing finger relaxes, resting on the page whereupon contact with pushbutton (105) activates the shut-off mechanism, dimming the light gradually. To continue reading, the dimming, or off, light is restored to previous brightness by resuming pointing the beam; raising the mounted finger breaks the contact with pushbutton (105) and deactivates the shut-off mechanism.

(54) Title: WATERWHEEL

(51) Int.Cl.: F 03B 7/00

(57) Abstract: A breastshot waterwheel is configured to extract energy from an incoming water flow. The waterwheel is rotatable about an axis and comprises a plurality of paddles, each of the said paddles being in communication with the incoming water flow for a respective water receiving portion of a rotation cycle of the waterwheel about the axis. During the water receiving portion of the rotation cycle for a said paddle, the incoming water flow flows onto a water receiving surface of the paddle. The water receiving surface extends between first and second ends of the paddle. The first end is upstream of the second end and is configured such that, during at least a portion of said water receiving portion of the rotation cycle for said paddle, the incoming water flow flows in a substantially horizontal direction across said first end of the paddle onto an upstream portion of the water receiving surface. At least a portion of the incoming water flow received by the upstream portion of the water receiving surface flows from the upstream portion onto a downstream portion of said water receiving surface, thereby changing direction and exerting a force on the paddle causing the waterwheel to rotate about the said axis in a rotational direction. The waterwheel is configured to rotate about said axis in said rotational direction such that a magnitude of a tangential velocity of the first end of the said paddle is less than a speed of the incoming water flow flowing across the said first end of the paddle during the water receiving portion of the rotation cycle for the said paddle.

(57) Abstract: Embodiments are directed to a companding method and system for reducing coding noise in an audio codec. A compression process reduces an original dynamic range of an initial audio signal through a compression process that divides the initial audio signal into a plurality of segments using a defined window shape, calculates a wideband gain in the frequency domain using a non-energy based average of frequency domain samples of the initial audio signal, and applies individual gain values to amplify segments of relatively low intensity and attenuate segments of relatively high intensity. The compressed audio signal is then expanded back to substantially the original dynamic range that applies inverse gain values to amplify segments of relatively high intensity and attenuating segments of relatively low intensity. A QMF filterbank is used to analyze the initial audio signal to obtain a frequency domain representation.

(57) Abstract: Methods (300, 400, 600) and computing devices (122, 150) are provided for obtaining a conserved token identifier (TID) for use in generating a token (118) for a prepayment meter (102), for modifying a token generation request, and for extending the functionality of a token generating system (100). The token (118) may be a prepayment utility token for a consumed utility such as gas, water or electricity. In one exemplary method, a transition TID value is obtained that is associated with a selected transition date. The transition TID value is greater than any TID values generated prior to the transition date, such prior TID values representing a number of original time intervals that elapsed from a specified TID base date. A number of new time intervals that have elapsed since the transition date is then determined, where the new time interval is longer than the original time interval. A conserved TID is

obtained by adding the number of new time intervals to the transition TID value. The conserved TID is used in generating a token (118) for the prepayment meter (102).

(57) Abstract: Embodiments provide techniques for dynamic spot beam assignment in a geostationary satellite communications network. For example, a ground processing node in the geostationary satellite network can monitor spot beam coverage area location and can detect a beam drift trigger indicating present drifting of one or more coverage areas. Ground terminals can be identified as serviced by spot beams associated with the drifting coverage area(s) and as experiencing a signal quality impact from the drifting. The ground terminal node can compute an update to a beam assignment map having a reassignment of the identified user terminals from their presently servicing spot beams to another of the spot beams in a manner that seeks to address at least some of the signal quality impact identified as associated with the drifting. Some embodiments further account for load balancing, and/or other factors, and/or can maintain stateful communications between the reassigned user terminals and the geostationary satellite.

agglomerates of hydrophobic particles usually entrap large amounts of water, causing the moisture of the recovered hydrophobic particles to be excessively high. This problem can be overcome by dispersing the hydrophobic agglomerates in a hydrophobic liquid that can be readily recycled. The dispersion can be achieved using specially designed apparatus and methods that can create a turbulence that can help destabilize the agglomerates in a recyclable hydrophobic liquid and facilitate the dispersion.

(51) 2016.01: C 02F 11/04, B 09B 3/00, C 10L 3/10

(57)

The present invention discloses a system for purification of high grade Biomethane fuel from Water hyacinth (*Ecchnoria crassipes*), an invasive weed that grows in polluted environments. The system comprises a bioreactor, water trap, hydrogen sulphide scrubber, dehydration unit, carbon dioxide scrubber, compressor and Biomethane fuel tank. The bioreactor operates within a range of 22 - 35 °C in a polyethylene cover. Also disclosed is production of high quality bio- fertilizer from *E. crassipes*. The gas initially produced in biogas is a mixture of Carbon dioxide 30-40%, methane 45-50%, nitrogen 5-6%, hydrogen sulphide 0.001% and other traces. The biogas is upgraded to 95% Biomethane. The invention discloses a process for removal of CO₂, H₂S and H₂O with an efficiency of 95-99%, 100%, and 100% respectively using local materials. The removal of H₂S protects the metallic parts from corrosion by the acid gas.

The bioreactor operates within a range of 22 - 35 DC in a polyethene cover. Also disclosed is production of high quality bio- fertilizer from *E. crassipes*. The gas initially

produced in biogas is a mixture of Carbon dioxide 30-40%, methane 45-50%, nitrogen 5-6%, hydrogen sulphide 0.001% and other traces. The biogas is upgraded to 95% Biomethane. The invention discloses a process for removal of CO₂, H₂S and H₂O with an efficiency of 95-99%, 100%, and 100% respectively using local materials. The removal of H₂S protects the metallic parts from corrosion by the acid gas.

 (54) Title: SECURE SANITARY DISPOSAL BAG

(57) Disclosed in the present invention is a secure sanitary disposal bag. The disposal bag is of generally rectangular construction, with the layers sealed together at their edges. On one side of wall, it has a flap, which has a continuous strip of adhesive material, overlaid by a peel-off strip. Once the peel-off strip has been removed and the overlap of the bag is brought into contact with the other side, thus becoming bonded together to close the said disposal bag to enable it accommodate used tampons, sanitary or incontinence towels, catheters and condoms.

A method and system are provided for large-scale processing of data records. The method includes: processing large-scale raw data records having no well-defined format and including a first type of data records having static values and a second type of data records relating to transactional records with timestamps of events. The method includes: filtering and transforming the data records to standardized formats and persisting the transformed data records into two different data stores that support a large amount of records, a first data store for static data relating to entities for efficient retrieval based on static values including a unique identifier of an entity, and a second data store for transactional data for efficient retrieval based on timestamps of events. The method further includes: grouping different categories of transactional records according to the unique identifiers of entities and persisting the categories to different tables including maintaining a table of stable size for efficient access of a category of transactional records that is most frequently accessed. The persisted data is used for retrieving features relating to an entity from multiple tables for processing to provide an output relating to the entity. The processed data may be utilised for credit scoring of an entity.

11.4 Removals

Section 23 of the Trade Marks Act provides that registration of a trade mark in Kenya shall expire after a period of **ten (10) years**. The Act also provides that the proprietor of a registered trade mark may make an application for renewal of the trade mark upon completion of the prescribed Form TM 10 and payment of the prescribed renewal fee.

Rule 65 of the Trade Mark Rules provides that where no application for renewal of a registered trade mark is received upon expiry of the ten year period, the Registrar of Trade Marks shall notify the proprietor of this fact. Where no application for renewal of the registered trade mark is received within a period of **sixty (60) days** from the date of the notice for renewal by the Registrar, rule 67 of the Trade Mark Rules requires the Registrar of Trade Marks to publish this fact.

In accordance with the above provisions, the Registrar of Trade Marks hereby notifies the public that the proprietors of the trade marks indicated below were duly notified and that they did not file applications for renewal of their respective trade marks.

In accordance with the provisions of rules 67 and 68 of the Trade Mark Rules, the public is hereby notified as follows:

- (a) Where the proprietor of a registered trade mark makes an application for renewal of a mark that has been published herein and pays the renewal fee together with the additional prescribed late renewal fee **within thirty (30) days** from the date of this publication, the trade mark shall be renewed and shall not be removed from the Register of Trade Marks;
- (b) Where no application for renewal of a trade mark published herein is received **within thirty (30) days** from the date of this publication, the trade mark shall be forthwith removed from the Register of Trade Marks; and

Once the trade mark is removed from the Register of Trade Marks, the proprietor may thereafter make an application for renewal of the mark upon payment of the prescribed renewal fee together with the additional prescribed restoration fee. The trade mark shall then be restored to the Register of Trade Marks upon the Registrar of Trade Marks being satisfied that it is just to do so and upon imposing such conditions as the Registrar may deem fit.
