(54) Title: UNIVERSAL DRIVE SYSTEM FOR MOTORCYCLE POWERED MACHINE

(72) Inventors:

(73) Applicant(s): DEDAN KIMATHI UNIVERSITY OF TECHNOLOGY, P.O. BOX 657-10100, NYERI, Kenya and MANUFACTURING ON WHEELS LTD, P.O.BOX 17360 GPO Nairobi, Kenya

(74) Agent:

(57) The invention is about a universal coupling for driving machines using a motorcycle. The universal drive system is flexible, easy to assemble/attach on a motorcycle power system and constructed from readily available materials and standard parts. It consists of (i) Adapter sleeve, (ii) retractable shaft, (ii) 2 No cardan joints, and (iii) flange couplings joint together using keys, bolts and nuts. The universal coupling is used to transmit power from the output shaft of a motorbike to run small machines, especially for agro-processing. The adapter sleeve is designed to adapt to existing dimensions of the lock key and the protrusion of the output shaft of the motorbike engine. This makes the idea novel since it does not require modification in any way on the side of the motorbike and the universal coupling can be modified to run any small rotary machine.

The present invention discloses an eco-friendly manufacturing method in which a crude alkaline protease is used for hydrolyzing and preparing feather protein concentrate powder by employing novel enzyme from *Bacillus Cereus* Strain wwcp 1. The method comprises the steps: (1) shredding/cutting the feathers into small sizes to increase surface area; (2) rigorous feathers cleaning to eliminate dirt and impurities; (3) Manufacturing Crude alkaline protease from *Bacillus Cereus* Strain wwcp1; (4) use of the manufactured enzyme to performing enzymatic feather hydrolysis to obtain feather solution; (5) Concentrating feather solution by drying to obtain protein feather powder; (6) use of obtained protein feather powder to fortify animal feeds. The technology is simplified, suitable for large scale industrial application and carried out at ambient environmental conditions of temperature, pressure and pH. The enzymatically solubilized feathers contain high protein concentration and essential minerals. The hydrolysate contains over 16 amino acids with high content of essential amino acids including histidine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, and valine. The soluble feather powder can be used as a source of protein, mineral salt and amino acid for feeds fortification. Generally, this invention is in part a green chemistry and environmentally friendly process of solid waste management and recycling to eliminate environmental pollution.

(51) Int.Cl.2016.01: B 01J 23/75, B 01J 35/02, C 10G 2/00

(57) Abstract: The process makes it possible to prepare a catalyst, intended for use in a Fischer-Tropsch reaction. In a reactor I a catalyst support impregnated with a solution of cobalt nitrate is oxidized at a calcining temperature comprised between 400°C and 450°C in order to produce a catalyst precursor comprising cobalt oxides. Then, the catalyst precursor is brought into contact in the reduction reactor A with the reducing gas rich in hydrogen and with a low water content , by circulating the flow of reducing gas, so as to reduce the cobalt oxides to Co and to produce water. Then, the water content is reduced to 200 ppmvol of the flow of reducing gas laden with water recovered at the outlet of the reactor A, and at

least a part of the flow of reducing gas is recycled to the reactor A. In the process, the reducing gas is maintained at a water content less than 10,000 ppmvol in the reactor A.

(57) Abstract: A method of limiting or reducing permeability of a matrix to liquid and/or gas inflow is described. The method includes limiting inflow of water, liquid and/or gas into passages such as cavities, fissures, voids and the like, encountered in formations such as geological formations though can be used to form barriers to water, liquid or gas flow through a matrix. The method includes steps of measuring one or more parameters relating to the matrix and selecting one or more components of a multi-component sealing composition with reference to the measured parameters. The selected components are introduced into the matrix where it is set or coagulated in a non-exothermic or low exothermic process to form a seal barrier. A method is also described whereby passage(s) within the matrix can be sealed with a sealing composition comprising a grout component and a grout curing agent. A portion of the grout component is mixed with a portion of grout curing agent, the ratio of each being selected with reference to the measured parameters. The combined grout/curing agent are introduced into the matrix where rate of curing or setting is controlled by modifying the grout/curing agent ratio.

(54) Title: A METHOD AND APPARATUS FOR PACKAGING OF ONE OR MORE BOXES FILLED WITH TOBACCO IN A PLASTIC BAG

(51) Int.Cl.2016.01: B 65B 5/02, B 65B 31/02

(57) Abstract: A method for packaging one or more tobacco-filled boxes in a plastic bag comprises the following steps of - placing the box in a vacuum chamber through an input, - closing the vacuum chamber, then evacuating the vacuum chamber and thereafter creating an over-pressure nitrogen atmosphere in the vacuum chamber, - putting a bag open at one end around a rectangular guide profile open at both ends,

where the other, closed, end of the bag shuts off one of the ends of the rectangular guide profile, - positioning the rectangular guide profile with the end not shut off by the bag in front of a shut off output of the vacuum chamber and coupling the rectangular guide profile in a gas-tight manner to the output of the vacuum chamber, - opening the output of the vacuum chamber and guiding the box into the bag via the rectangular guide profile, and - folding the open end of the bag immediately followed by the sealing of the bag. By processing the box in the vacuum chamber before a plastic bag is put around the box, it is better to create under-pressure in the box and flush it with nitrogen because the box has not yet been shut off on three sides by the plastic bag in a gas-tight manner. As a result, a better atmosphere can be created in the box or the optimal atmosphere in the box can be created in a faster manner.

(57) Abstract: A sorghum seed comprising in its genome at least one polynucleotide encoding a polypeptide having an alanine to threonine substitution at position 93 of the sorghum AHAS protein large subunit. The plant has increased resistance to one or more herbicides, for example from the imidazolinone group, as compared to wild-type sorghum plants. The sorghum plant may comprise in its genome, one, two, three or more copies of a polynucleotide encoding a mutated large subunit of sorghum AHAS or a sorghum AHAS polypeptide of the invention. In this context, the sorghum plant may be tolerant to any herbicide capable of inhibiting AHAS enzyme activity. For example, the sorghum plant may be tolerant to herbicides of the imidazolinones type, such as imazethapyr, imazapir, and imazapic or to herbicides of the sulfonylurea group.

(57) Abstract: A solar cell management system for increasing the efficiency and power output of a solar cell and methods for making and using the same. The management system provides an electric field across an individual solar cell, an array of solar cells configured as a panel, or a group of solar panels. The imposed electric field exerts a force on both the electrons and holes created by light incident on the solar cell and accelerates the electron-hole pairs towards the electrodes of the solar cell. Compared to conventional solar cells, these accelerated electron-hole pairs travel a shorter distance from creation and spend less time within the solar cell material, therefore the electron-hole pairs have a lower likelihood of recombining within the cells' semiconductor's material. This reduction in the electron-hole recombination rate results in an overall increase in the solar cells' efficiency and greater power output.

There are typically four columns on a semisubmersible. Hydrocarbon liquids may be stored in only two of the four columns, thereby providing a safe-zone where the living quarters are located. A column houses at least one hydrocarbon storage (cargo) tank and at least one variable ballast tank, where the weight capacity of the hydrocarbon cargo tank(s) is approximately equal to the weight capacity of the variable ballast tank(s). The hydrocarbon cargo tank (s) and the variable ballast tank(s) are positioned in such an orientation that the horizontal center of gravity of the cargo tank(s) is (nearly) identical to horizontal center of gravity of the variable ballast tank(s). Both the hydrocarbon cargo tank and the variable ballast tank may be directly accessible from top of-column.

(54) Title: NUTS IN BEVERAGES

(57) Nuts in beverages are a range of beverages containing substantial proportions of powdered whole macadamia nuts (both shell and kernel) for human consumption. The main characteristic of these products is the substantial presence of macadamia shell powder which is considered unpalatable by other macadamia brands. The presence of the nut shell powder is occasioned by the invention's primary objective of simplifying macadamia processing to just grinding dried nuts in a mill to lower processing costs. The shell is present as a relatively neutral byproduct of the process. Almost tasteless and odorless and with no known side effects the shell does not notably affect the positive attributes of the accompanying kernel especially when blended with other beverages of strong aroma and tastes which may include but not limited to coffee, tea and cocoa. Rather, the shell provides additional dietary fiber. Thus, the invention provides cheaper beverages with higher nutritional value and better tastes.

Section 23 of the Trade Marks Act provides that registration of a trade mark in Kenya shall expire after a period of **ten (10) years**. The Act also provides that the proprietor of a registered trade mark may make an application for renewal of the trade mark upon completion of the prescribed Form TM 10 and payment of the prescribed renewal fee.

Rule 65 of the Trade Mark Rules provides that where no application for renewal of a registered trade mark is received upon expiry of the ten year period, the Registrar of Trade Marks shall notify the proprietor of this fact. Where no application for renewal of the registered trade mark is received within a period of **sixty (60) days** from the date of the notice for renewal by the Registrar, rule 67 of the Trade Mark Rules requires the Registrar of Trade Marks to publish this fact.

**In accordance with the above provisions, the Registrar of Trade Marks hereby notifies the public that the proprietors of the trade marks indicated below were duly notified and that they did not file applications for renewal of their respective trade marks.**

In accordance with the provisions of rules 67 and 68 of the Trade Mark Rules, the public is hereby notified as follows:

- (a) Where the proprietor of a registered trade mark makes an application for renewal of a mark that has been published herein and pays the renewal fee together with the additional prescribed late renewal fee **within thirty (30) days** from the date of this publication, the trade mark shall be renewed and shall not be removed from the Register of Trade Marks;
- (b) Where no application for renewal of a trade mark published herein is received **within thirty (30) days** from the date of this publication, the trade mark shall be forthwith removed from the Register of Trade Marks; and

Once the trade mark is removed from the Register of Trade Marks, the proprietor may thereafter make an application for renewal of the mark upon payment of the prescribed renewal fee together with the additional prescribed restoration fee. The trade mark shall then be restored to the Register of Trade Marks upon the Registrar of Trade Marks being satisfied that it is just to do so and upon imposing such conditions as the Registrar may deem fit.
