(57) Biogas production is a green method of increasing renewable fuels while reducing land pollution. However, the process is quite slow, produce low yields and low-quality biogas at mesophilic temperature regimes. Optimization using enzymes or use of higher temperature is expensive; especially at small scale levels. This study aimed assessing the catalytic effects of ferric oxide on biogas production at cryo-mesophilic temperature regime. Cow dung biogas substrate was used for biogas generation in 1.5-liter batch reactors. Temperature, pH, biogas volumes and combustion were monitored in a 100-day retention period. The results indicate that use of this additive stabilized biogas pH. As a result, more biogas (4.5 times) was achieved compared to the control sample. The additive also reduced the period taken to produce combustible biogas by 6 days. Use of this additive can thus reduce biogas production process while increasing biogas yields.

(57) Abstract: The entropy coding of a current part of a predetermined entropy slice is based on, not only, the respective probability estimations of the predetermined entropy slice as adapted using the previously coded part of the predetermined entropy slice, but also probability estimations as used in the entropy coding of a spatially neighboring, in entropy slice order preceding entropy slice at a neighboring part thereof. Thereby, the probability estimations used in entropy coding are adapted to the actual symbol statistics more closely, thereby lowering the coding efficiency decrease normally caused by lower-delay concepts. Temporal interrelationships are exploited additionally or alternatively.

(51) Int.Cl.2016.01: H 04B 7/185, H 04W 24/04, H 04W 24/02

(57) Abstract: Systems and methods are described for scintillation mitigation in satellite communications systems with geographically distributed access nodes. Some embodiments operate in context of a bent-pipe satellite that illuminates user and gateway coverage areas with fixed spot beams. Beamforming can be used, along with coordinated, phase-synchronized communication by the distributed access nodes, to generate signals that coherently combine via the satellite. Scintillation and/or other atmospheric irregularities can degrade phase synchronization at the access nodes. Accordingly, embodiments can monitor phase tracking performance of the access nodes to detect when a phase tracking error occurs in at least one of the access nodes. In response to detecting the phase tracking error, embodiments can inhibit transmitting of forward uplink data signals by at least that access node.

 (54) Title: FLUID CONTROL
 (51) Int.Cl.2016.01: E 03C 1/04, F 16K 43/00
 (57) Abstract: The present invention relates to fluid control and management. In particular, it relates to valves or regulators for controlling a flow of fluid, such as, but not limited to, taps and faucets. We will describe a fluid control valve comprising a valve body having an inlet, for operative connection to a supply of pressurised fluid, and an outlet and defining a fluid flow path therebetween. A first valve is adjustable under the control of a first valve actuator between a first, or closed, position in which flow of fluid through the first valve is prevented and a second, or open, position in which flow of fluid through the first valve is permitted. The valve is characterised in that the fluid control valve further comprises a second valve associated with the inlet or intermediate the inlet and the first valve, wherein the second valve comprises a second valve body and a second valve actuator adapted such that the first valve actuator bears against the second valve actuator in each of said first and second positions to urge the second valve into an open configuration allowing flow of fluid; and further wherein the fluid control valve is arranged such that the first valve actuator is adjustable to a third position in which the first valve actuator is spaced from the second valve actuator by a separation sufficient to allow fluid pressure at the inlet to cause the second valve to close, preventing flow of fluid through the fluid control valve.

(51) 2016.01: H 02J 9/06, H 02J 7/02

(57)

The present invention is an automatic change over switch in which a single three core cable (red, black and earth wire) conducts different types of currents and automatically transmits them to the necessary bulbs which lights automatic in case one line of current fails. The circuit is able to sense when power fails from the mains and automatically and instantly switches on the DC current from the battery using the same cable which was conducting the alternating current from the mains of electricity power lines. The switch has the capability of the changeover of the power supply source from AC to DC. During the time of normal power supply, it operates on AC power. Once the AC supply fails, it automatically changes over to operate on a DC supply from a battery which is continuously being charged during the time of normal operation.

(54) DIGITAL FUNDS TRANSFER TECHNOLOGY FOR MOBILE BANKING

(57)

This is a digital innovation that uses serial data communication to create a network that forms an Internet of Things (IoT) technological setup. It transfers users data between programmed gadgets to identify the user while carrying out a transaction. Serial communication protocols such as SPI, 12C, UART or RS-232, are used to transfer identifier data across each gadget, which is then processed to retrieve users information. This information is important to create records of the transaction that both parties have instantiated. The gadget employs security features such as passcodes, passwords, scanners such as fingerprint, eye or facial scanners for physical security and identify the user operating it.

(57) The invention discloses combination therapies for treatment of multidrug-resistant malaria parasites and method thereof. The therapies comprise combining lumefantrine (LM) and any of the reversing agents (RA) which is selected from a group consisting of cyproheptadine (an antihistamine compound), verapamil (a calcium (Ca^{+2}) channel blocker) or probenecid (an anion transporter inhibitor). The invention is designed to kill LM and piperaquine (PQ) resistant parasites. To accomplish treatment, cyproheptadine, verapamil or probenecid is administered orally in combination with, subsequent to, concurrent to or prior to, a therapeutically effective dose of LM. In one embodiment, the combinations of LM with cyproheptadine, verapamil or probenecid are highly effective against PQ resistant strains of rodent *P. berghei* at low concentration levels. In another embodiment, LM, in combination with cyproheptadine is highly effective against LM resistant strains of rodent *P. berghei* at low concentration levels.

The present invention relates to a method of producing microcrystalline cellulose, and in particular a method of extracting microcrystalline cellulose from coir fibers. Coir fiber is an agricultural feedstock that has been neglected and can now be used to produce microcrystalline cellulose. The method of extracting microcrystalline cellulose fiber from coir fibers is characterized in that it comprises following steps:

Preparing the sample, extracting cellulose from the dried biomass/coir, and Converting cellulose to microcrystalline cellulose. The conversion to microcrystalline cellulose involves treat cellulose with 2.5 N hydrochloric acid at 85°C for 15 min followed by washing with ethanol (10% v/v) then drying in an oven set at 105°C to constant weight. The microcrystalline cellulose is industrially applicable in the binder, pharmaceutical, and paper making industries.
